

Gopinathan Krishnasamy

Senior Cloud DevOps & AI Infrastructure Engineer

Bangalore, India | gopinath180695@gmail.com | +91 96984 59551 | [LinkedIn Profile](#) | [GitHub URL](#)

SUMMARY

Senior Cloud DevOps and AI Infrastructure Engineer with 9+ years of experience building and operating enterprise cloud platforms across AWS, Azure, and IBM Cloud, with hands-on experience developing production-oriented Generative AI and LLM applications. Experienced in Kubernetes, Terraform, CI/CD, GitOps, RAG, AI agents, LLMops, and AI-driven automation, with a track record of improving deployment efficiency, cloud cost, platform reliability, and engineering productivity.

SKILLS

Cloud Platforms: AWS, Microsoft Azure, IBM Cloud

Infrastructure as Code: Terraform, Ansible, Azure Bicep, Azure DevOps

CI/CD & GitOps: Jenkins, Groovy, Argo CD, GitLab, AWS CodePipeline, SonarQube, Trivy, jFrog Artifactory

Containers & Orchestration: Docker, Kubernetes, Helm, Container Registries, Velero

Observability & SRE: Prometheus, Grafana, Zabbix, Sysdig, ELK Stack, LangSmith

Generative AI & LLMops: LLMs, LangChain, LangGraph, Retrieval-Augmented Generation (RAG), AI Agents, Model Context Protocol (MCP), AutoGen, CrewAI, AWS Bedrock, Azure OpenAI, Azure AI Foundry, Knowledge Graph

Automation & Development: Python, Bash, Shell Scripting, SQL, Git, FastAPI, Streamlit, n8n

Operating Systems: Linux, Trouble Shotting

EXPERIENCE

Senior Cloud DevOps Engineer — IBM

Nov 2022 – Present

- Architected and maintained **50+ enterprise Jenkins pipelines** using Groovy, **reducing deployment cycle time by 40%** and **eliminating 90% of manual release errors** across non-production and production environments.
- Designed and deployed containerized **RAG applications** microservice on AWS EKS and IBM IKS using Docker, LangChain, and FAISS, integrating LLM-powered capabilities into cloud-native platforms.
- Built an **AI-powered GitHub pull request validation tool** leveraging LLM-based Generative AI to automate code reviews, static security analysis, and secret exposure detection, strengthening CI/CD pipeline security.
- Automated QA infrastructure provisioning through an AI ChatOps workflow using Slack, n8n, and Azure OpenAI, handling **250+ monthly requests** across **8 engineering teams** and **reducing setup time from 35 minutes to under 3 minutes**.
- Engineered a Generative AI-based **Infrastructure as Code (IaC) drift detection pipeline** using LLMs and n8n that captures manual cloud console changes, evaluates security risk against Terraform state with context-aware prompts, and triggers real-time Slack alerts **within 2 minutes**.
- Implemented **LangSmith tracing** and **AI guardrails** for LLM/agent workflows, improving observability and reducing troubleshooting effort across AI-enabled applications.
- **Integrated SonarQube, jFrog Artifactory, and Trivy** into Jenkins and Azure DevOps pipelines, improving software quality and security controls across the delivery lifecycle.
- Refactored enterprise Docker image strategy using multi-stage builds and Alpine and distroless base images, **reducing average image size by 70% (1.2GB to 350MB)** and **container vulnerabilities by 85%**.
- Led migration to GitOps-based continuous delivery using Argo CD, Docker, and Kubernetes, increasing release frequency from weekly batches to **15+ daily zero-downtime deployments**.

- Built modular, reusable Terraform frameworks to automate provisioning across **5+ enterprise cloud environments** on Azure and IBM Cloud, **cutting provisioning time by 75% (from 3 hours to 45 minutes)**.
- Redesigned production AWS e-commerce infrastructure to eliminate architectural bottlenecks, **reducing monthly cloud infrastructure spend by more than 20%** through right-sizing and lifecycle automation.
- Migrated legacy workloads to containerized Kubernetes applications and serverless microservices, **cutting annual AWS and Azure cloud costs by 35%**.
- Established a unified observability stack combining Prometheus, Grafana, ELK, Sysdig, and Zabbix, **increasing monitoring coverage by 60%**.
- Led **IBM Cloud regional expansion across India** by directing bring-up, configuration, and operational readiness of core VPC compute services for the Chennai and Mumbai data centres, earning recognition for onboarding NGDC regions.
- **Mentored 5 DevOps engineers** and coordinated delivery across **10 engineering pillar teams**, sustaining a **99.9% platform availability SLA**.

DevOps Engineer — Infinite Computer Solutions

Mar 2021 – Oct 2022

- Provisioned and managed AWS EKS clusters using Terraform and Docker containers, **achieving 99.95% uptime** for critical core microservices.
- Led production support, incident triage, and root cause analysis (RCA) for critical incidents, improving system stability and preventing repeat outages.

Associate Engineer — Accenture

Apr 2017 – Feb 2021

- Managed **100+ AWS EC2 Linux instances**, Lambda functions, and cloud resources supporting business-critical enterprise applications, **maintaining 99.9% uptime**.
- Received the **Accenture Pinnacle Award** for outstanding performance and contribution to enterprise cloud operations.

CERTIFICATIONS & ACHIEVEMENTS

- **AWS Certified Solutions Architect – Associate**
- Recognized for onboarding NGDC regions into IBM Cloud
- **Accenture Pinnacle Award**

EDUCATION

B.E. in Mechanical Engineering — Sri Krishna College of Technology, Coimbatore
